FlowDesk 3.0 - Product Requirements Document

The AI-first release of the FlowDesk customer-support helpdesk

Field	Value
Document ID	PRD-FD-030
Version	1.4 (approved)
Last updated	22 July 2026
Owner	Product Management - Support Cloud
Status	Approved for build. GA target: 15 September 2026

1. Problem statement

Mid-market support teams spend most of their day on repetitive tickets. In our FlowDesk 2.x customer base, 61% of all tickets are 'where is my order', password resets, refund status or plan-change requests. In version 2.4 our AI answered only **28%** of tickets end-to-end without a human (the *AI resolution rate*). Competitors now market 40-50%. FlowDesk 3.0 closes this gap.

2. Target personas

Persona	Who	Primary job to be done
Support Agent (Asha)	Front-line agent, handles 60-90 tickets a day	Clear the queue fast without sounding robotic
Support Lead (Marcus)	Manages 10-40 agents	Hit SLA and CSAT targets; see where the team is stuck
Ops Admin (Wei)	Configures the helpdesk	Set up channels, routing and AI policies without engineering help
Buyer (Head of CX)	Signs the contract	Lower cost per ticket while keeping CSAT high

3. Scope - features in 3.0

ID	Feature	Description	Priority
F1	Auto-Resolve Agent	An AI agent that reads a ticket, looks up order/account data through connected tools, and resolves it end-to-end. Hands off to a human when confidence is below 0.75.	P0
F2	Smart Routing v2	Routes tickets by intent, language, customer tier and agent skill. Replaces round-robin routing from 2.x.	P0
F3	Knowledge Gap Detector	Clusters tickets the AI could not answer and suggests new help-centre articles. Beta in 2.6, GA in 3.0.	P1
F4	WhatsApp channel (GA)	Two-way WhatsApp Business messaging. Beta since 2.5.	P1
F5	Copilot summaries v2	One-click thread summary and suggested reply for human agents.	P1
F6	Multilingual AI	Auto-Resolve and Copilot work in 12 languages at launch, including Hindi and Tamil. Target: 20 languages by Q1 2027.	P1

4. Non-goals for 3.0

- **Voice channel.** Phone/voice support is out of scope for 3.0. It is planned for Q1 2027.
- **On-premise deployment.** FlowDesk remains cloud-only. On-prem is 'under consideration', not committed.
- **Native Salesforce integration.** Only the existing Zapier connector is supported in 3.0; a native integration is on the Q4 2026 roadmap.

5. Functional requirements

Req	Requirement	Feature
R1	Auto-Resolve must hand off to a human when model confidence < 0.75, and must never issue a refund above \$200 without human approval.	F1
R2	Every AI reply must cite the help-centre article or data source it used.	F1, F5
R3	Admins can switch Auto-Resolve off per channel, per intent, or per customer tier.	F1
R4	Smart Routing must assign 95% of tickets within 5 seconds of arrival.	F2
R5	Knowledge Gap Detector refreshes clusters every 24 hours.	F3
R6	Customer PII (email, phone, card digits) is masked in AI training logs.	All

6. Success metrics

Metric	Baseline (v2.4)	Target	Target date
AI resolution rate	28%	45%	31 Dec 2026
Auto-Resolve accuracy (offline eval set of 2,000 tickets)	n/a	>= 92%	At GA
Median first response time	3 min 40 s	< 30 s	At GA
CSAT (AI-resolved tickets)	4.1 / 5	>= 4.4 / 5	31 Dec 2026
Cost per ticket for customers	\$4.10	\$2.60	31 Mar 2027

7. Risks and open questions

- Hallucinated refund or policy answers. Mitigation: R1, R2, and a nightly grounding audit.
- Indic-language quality. Hindi and Tamil transliterated (Roman-script) input scored 81% in the offline eval, below the 92% bar.
- Pricing of AI usage. Finance and PM to agree whether AI resolutions are metered separately (see the Pricing & Packaging document).
